

IZZY LUCIA SCHLICHTING

SOFTWARE ENGINEER · BACKEND, DATA & AGENT SYSTEMS · TECHNICAL FOUNDER

izzy@chaos-dev.ai · chaos-dev.ai · linkedin.com/in/isa-lucia-sch · github.com/iz444zy

PROFESSIONAL SUMMARY

Software Engineer and Technical Founder with 8+ years of programming experience designing backend, data, and agent systems for complex information processing and coordinated execution. Built a 92,000+ line multi-agent development runtime, a 26,000+ line medical-annotation platform, and operational data automation supporting 600+ vendors. Specializes in reliable, inspectable infrastructure spanning runtime systems, information retrieval, workflow automation, and developer tooling.

TECHNICAL SKILLS

Languages & Frameworks: Python, Java, TypeScript, JavaScript, SQL, FastAPI, Pydantic AI, React, React Native, SQLAlchemy

Backend & Runtime Systems: REST APIs, OpenAPI, WebSockets, CLI Development, asyncio, Durable Execution, Task Orchestration, Concurrency Control, Event Journaling, Event Sourcing / Replay, OAuth

AI & Agent Systems: Multi-Agent Systems, Agent Orchestration, Context Engineering, Harness Engineering, Retrieval-Augmented Generation (RAG), Hybrid Retrieval and Ranking, Context Hydration and Targeted Injection, Persistent Memory, GitHub Copilot, ChatGPT Codex, Claude, Model Context Protocol (MCP), FastMCP, Policy Enforcement

Data Engineering & Storage: PostgreSQL, SQLite, Supabase, Alembic, ETL, Airtable, Data Modeling, Database Migrations, Schema-Agnostic Ingestion, JSON/XML Processing, Data Transformation and Normalization

Infrastructure & Developer Tooling: Git, GitHub Apps, GitHub Actions, Docker, Docker Compose, Terraform, Vercel, CI/CD, Bash, PowerShell, Event-Driven Architecture, Distributed Systems, Local-First Architecture

Testing, Quality & Observability: pytest, Unit Testing, Integration Testing, E2E Testing, Contract Testing, Test Automation, Coverage Analysis, Ruff, mypy, Structured Logging, Metrics, Tracing

PROFESSIONAL EXPERIENCE

Technical Founder & Software Engineer

CHAOS AI · chaos-dev.ai · Technical Showcase | Long Island, NY February 2026–Present

- Independently architected and developed CHAOS into a 92,000+ line Python runtime in under six months, spanning MCP gateways, task orchestration, context hydration, event infrastructure, Git automation, provider integration, CLI tooling, and analytics.
- Developed GitManager for continuous commits, Draft PR publication, staged integration, and recovery, distinguishing clean merges, scripted resolutions, true conflicts, configuration failures, and transient states.
- Established a verification suite with 6,766 passing tests and 72% statement coverage across unit, integration, end-to-end, contract, replay, and released-runtime acceptance checks.
- Engineered a policy-enforced MCP gateway and context-hydration pipeline with capability validation, evidence ranking, token budgets, and selection provenance; built durable task claiming and replayable event infrastructure for deterministic restart recovery.

Research Assistant - Data Engineering & Software Development

Human Factors and Neuroscience Lab, NYIT | New York City, NY August 2025–January 2026

- Designed and built MAPS, a 26,000+ line full-stack platform that converted medical-imaging annotation and literature requirements into reproducible ingestion, review, analysis, and export workflows.
- Prepared and standardized 1,000+ heterogeneous imaging-annotation and literature files; collaborated with investigators to define data models, validation criteria, and multi-observer review procedures.
- Mentored two computer science interns in database organization, contribution practices, and collaborative software development in a large codebase.

IT Contractor

Cornell Cooperative Extension · Taste NY Program | Long Island, NY January 2025–May 2026

- Managed an Airtable-based operational data system containing records for more than 600 Taste NY vendors.
- Automated vendor intake, synchronization, reporting, and record maintenance, producing analysis for program evaluation, planning, and decision-making.

PROJECTS

CHAOS — Multi-Agent Development Runtime & Technical Showcase

Python · SQL · Bash/PowerShell · FastMCP · PostgreSQL · Docker · GitHub Apps · github.com/iz444zy/CHAOS

- Public showcase of selected architecture, verified engineering evidence, and a sanitized development record; production source remains private to protect proprietary implementation during active development.

MAPS — Medical Annotation Processing System

Python · FastAPI · React · WebSockets · PostgreSQL · SQLite · Supabase · github.com/iz444zy/MAPS

- Built a 26,000+ line full-stack platform for schema-agnostic medical-imaging ingestion, analysis, collaborative review, and export across XML, JSON, PDF, and ZIP inputs.

SMG-100 — Super Mario Galaxy Completion Tracker

Java · CLI · JSON · github.com/iz444zy/SMG-100

- Built a keyboard-driven Java CLI that tracks 248 collectibles using game-accurate unlock logic, JSON persistence, automated backups, filtering, and completion statistics.
